

# **SOLATUBE®**

Garage Fans

Whatever you do in your garage, keep it cool.

Hot, stale air out.

Cool, fresh air in.

# Solutions for every garage configuration.

## Solar Roof Mounted Garage Fan

When the sun beats down on your open-ceiling garage's roof and heats up the garage, Solatube's RM 1500 or RM 2400 roof-mounted solar fan is an ideal solution. It runs all day without using any electricity so you keep the entire space cool with no cost to operate.

## Internal Mount Garage Fan

When you're as busy in the garage as the living space above it, you want a solution to keep it cool. Solatube delivers a solar fan (IM 1500) that mounts on a side vent to pull the hot air out of the garage all day so you can do everything in your garage in total comfort. This solution is an ideal option for virtually any garage configuration.

## Powered Garage Fan

For garages with attic space above them, you want to keep both spaces cool to stay comfortable and protect your home from the elements. Solatube's powered garage fan pulls hot air from the garage and pushes it out attic vents while bringing cool air in from the outside.

Fire Rated Damper Doors

You may have many uses for your garage.

We have many ways to keep it cool. Whether you're working on your car, your fitness or your next great project, you want to keep the heat out.

At Solatube, we have powered and solar ventilation fans to remove heat and fumes from any garage and bring in cool, outside air.
