Solatube International, Inc. | 2210 Oak Ridge Way | Vista, CA 92081-8341 | www.solatube.com | T: 888.SOLATUBE

© 2016 Solatube International, Inc.
Part No. 949990 v1.9
**WARNING**

Do not proceed with the installation until you have read the entire instructions, including these warnings. (Use of materials or methods not authorized by Solatube International will result in an invalid warranty.)

Solatube International, Inc. (seller) assumes no responsibility or obligation whatsoever for the failure of an architect, contractor, installer, or building owner to comply with all applicable laws, ordinances, building codes, electrical codes, energy codes, fire and safety codes and requirements, roof warranties and adequate safety precautions. Installation of this product should be attempted only by individuals skilled in the use of the tools and equipment necessary for installation. Protect yourself and all persons and property during installation. If you have any doubt concerning your competence or expertise, consult a qualified expert before proceeding.

**Install at your own risk!**

Solatube product installations may be dangerous and include the potential for death, personal injury and property damage. The hazardous conditions include but are not limited to the following:

- **During installation**, the Solatube Daylighting System’s reflective tubes may focus sunlight, causing intense heat or fire. Remove protective film only after the parts have been installed. Prior to and during installation, do not leave tubes in contact with combustible materials or unattended, especially near direct sunlight. Avoid skin burns.

- Solatube Daylighting System and Solar Star products may have sharp edges. Always wear leather or canvas gloves while handling and installing products.

- Solatube product installations require climbing and working at dangerous heights, including on ladders, scaffolding, roofs and in attic spaces. Risk of death, personal injury and property damage may result from a fall, or from falling objects. Use extreme caution to minimize risk of accidental injury, including, but not limited to the following procedures:
  - Clear area below your work space of all people, animals and other items.
  - Avoid working on surfaces that are slippery or wet.
  - Use foot-wear with excellent traction.
  - Use only strong, well supported ladders.
  - Work only in calm dry weather.
  - When in the attic, ensure that your weight is supported at all times with structurally sound framing; drywall material is not designed to carry a person’s weight.

- To reduce the risk of fire, electric shock, and personal injury, basic safety precautions should always be followed when using electric tools, including always wearing safety goggles or other suitable eye protection, and ensuring work area is clear of all electrical wires, gas pipes, water pipes, and other obstacles.

- When working in the attic or other dusty areas, use of a mask or respirator is recommended to avoid lung irritation. Attic spaces may be dark, confined, and subject to extreme temperatures. Beware of sharp protruding objects. Do not attempt installation without having someone within range of your voice or close enough to come to your aid if necessary.

- Solatube products are not designed to withstand the weight of a person, tools or other objects. Walking or placing objects on a Solatube product installation could cause personal injury and property damage. If the product is damaged, the structural capacity may be weakened; therefore the system should be repaired immediately. For safe installation and use, do not deviate from these installation instructions.

- Additional support is recommended for long vertical and all horizontal tube runs. Review local building requirements and consult with appropriate building code official for proper material and placement of additional support. Avoid galvanic reaction (corrosion) if dissimilar metals are used.

**Electrical Components**

- Before installing, servicing, or cleaning unit, switch power off at service panel and lock service panel to prevent power from becoming switched on accidentally. When the service disconnecting means cannot be locked, securely fasten a prominent warning device such as a tag to the service panel.

**Re-Roofing**

- Solatube products require special care if removed for re-roofing. In order to ensure proper removal and re-installation, please contact your Solatube International representative.

---

**Please refer to the installation tips for the appropriate product below:**

**Daylighting Systems Installation Tips**

These instructions are a step-by-step guide for the installation of a Solatube Daylighting System in the following conditions. For other roof types, please contact your Solatube International representative for additional information.

- Built Up Flat Roof - Single Ply/Membrane - Asphalt Shingle - Low/No Pitched - Pitched - Prefabricated Curbs - Metal Roof Panels

---

Part No. 949990 v1.9
Daylighting Systems Installation Tips (Continued)

- Allow 1/2 hour (30 min) for the installation excluding curb fabrication, particularly if this is your first installation.
- During the day, turn off all the lights in the room to see how much natural light comes in through the windows, and determine the best position for the Solatube Daylighting System. To light a specific area, place the system over the area, not in the center of the room. This will prevent the desired area from being shaded by tall objects in the room.
- Measure the distance from curb to diffuser level. If you don’t have enough tubing, contact your Solatube International representative for additional tubing.
- Avoid roof locations shaded by trees, ridges and chimneys, or near water channels or valleys. Also avoid roof areas with obstructions such as fire sprinklers, HVAC equipment, gas, water or drain pipes, air ducts or flues and make sure that the roof is adequate to endure an installation without damaging its waterproofing properties or weakening the building structure.
- All adhesives and seals are recommended to be applied to a clean and dry surface at a minimum of 70°F (21°C) for maximum performance.
- For installations where high levels of soot or debris may be present it may be necessary to use foil tape to seal all joints and tube seams to prevent excess debris from entering the tubing.
- It is recommended to use foil tape to seal all joints and tube seams for installations in cold climates or where humid conditions may be present in order to prevent warm or moist air from entering the tubing.
- Uninstalled product that is stored and exposed to excessive heat and or humidity can experience damage. Store product prior to installation in a cool dry place.
- FM (Factory Mutual): All SkyVault roof assemblies (Excluding Collector Cylinder Assembly) meet requirements for FM Approvals.

FM APPROVED

- UFC-4-010-01: All SkyVault roof assemblies (Excluding Collector Cylinder Assembly) meet requirements for United Facilities Criteria (UFC) DoD minimum antiterrorism standard for buildings.
M74 DS Installation Instructions

1. Place Pre-Assembled Roof Assembly onto Curb
   Note: Curb provided by others.
   Note: To prevent scratches do not remove protective liner from dome until installation is complete.

   ![Diagram of Pre-Assembled Roof Assembly]

   Curb Construction Details: Curb provided by others.
   Curb OD: 34 3/8 in (873 mm) x 34 3/8 in (873 mm) to allow for 0.5 in (13 mm) waterproofing membrane.
   Metal Curb OD: 35 in (890 mm) x 35 in (890 mm). If membrane layer is to be applied to outside of metal curb, use curb OD above.
   Framing Member Thickness: 1.5 in (38 mm) minimum 2.5 in (64 mm) maximum including insulation.
   Curb Height: 7.5 in (191 mm) minimum. Refer to local building code requirements.
   Curb Aspect: Level curb top and plumb curb walls. For sloped roofs add cricket to divert water.

2. Assemble Extension Tube
   Punched holes and install rivets.

   ![Diagram of Assembling Extension Tube]

   For ease of tube assembly and attachment, invert Roof Assembly and place onto curb.

   For the most current Installation Instructions, please visit www.solatube.com/instructions
3. Install Extension Tube
tube to tube collar on pre-assembled roof assembly.

- Tube seams must be on opposing sides

4. Assemble Tube Belt and Install

- Align 1 Tab Lock and hook into place.
- Continue to engage remaining tab locks with each long section of tubing resting on outside of tube or collar.
- Close Belt Latch to fasten Tube Belt.
- Press firmly to lock Belt Latch into place.
5 Install Diffuser

- Tube seams must be aligned to be on opposing sides.

6 Install Tube Belt
Note: For proper Belt attachment ensure Tube Belt is not clamped onto Diffuser Seal.

- Align Tube Belt to rest on top of Belt Alignment Tab.
- Close Belt Latch to fasten Tube Belt.
- Press firmly to lock Belt Latch into place.

7 Install Assembled Unit into Roof Curb.

- Continue to engage remaining tab locks with each long section of tubing resting outside of tube or collar.
8 Fasten Roof Assembly to Curb
Remove Protective liner from dome.

Alternate Instruction for Multiple Tube Attachment

Note: If installing more than 48 in (1220 mm) of tubing use the following steps.*

9 Install Assembled Unit into Roof Curb.

10 Install Additional Extension Tubes

Attach extension tube. See step 3 for attachment method.

Install Tube Belt. See step 4 for attachment method.
Amplifier Installation Instructions

12 Install First Amplifier Section
Install Amplifier from below.

13 Install Remaining Amplifier Sections
Bend remaining Tab Locks to lock Amplifier sections into place.
**14 Fasten Amplifier Sections**
Align pre-punched holes and install rivets.

1. Align Amplifier sections to ensure flat section overlaps to sit on top of offset.
2. Use Rivet gun to fasten rivets

**15 Apply Foil Tape**

1. Apply foil tape to cover tab and opening.
2. Apply pressure to foil tape for
Install Tube Belt and Amplifier Diffuser

Align belt just over top edge of rivets.

Install Tube Belt. See step 4 for attachment method.

Apply foil tape to cover long section of diffuser to ensure proper seal.

Install Amplifier Diffuser. See step 5 for attachment method.

Install Amplifier Belt to rest on edge of diffuser seal.

Now you can enjoy the benefits of your Solatube Daylighting System and the high performance, natural lighting it provides.

Please refer to the following section for a list of accessories.

### Required Tools:

- Tape Measure
- Rivet Gun
- Screw Gun with Phillips Head
- Drill Bit #30
- Nut Driver 3/8 in (15.875 mm)

* M74 DS Cylinder Assembly Meets High Velocity Hurricane Zone (HVHZ) Requirements.
* All M74 DS Options Meet High Velocity Hurricane Zone (HVHZ) Requirements.
† Components shown not included in all kits, see label on box.
** M74 DS Collector Cylinder Assembly Does Not meet requirements for FM Approvals or UFC-4-010-01
1. Remove Bridle Assembly
   Remove all 4 Bridle Assemblies
   Note: To prevent scratches do not remove protective liner from Collector until installation is complete.

   CAUTION: Unassembled Bridle Assemblies are a Trip Hazard. Use Caution During This Step.

2. Remove Collector from Flashing
   Remove collector and set aside.

3. Place Roof Assembly onto Curb

   CAUTION: Unassembled Bridle Assemblies are a Trip Hazard. Use Caution During This Step.

Please return to step 2 of the SkyVault Series installation instructions for tubing and diffuser attachment before proceeding to step 4 of these instructions.
4. Re-Install Collector
Carefully place and center collector over roof assembly.

5. Adjust Collector Position
In the Northern Hemisphere position the Collector so the reflective side of the Light Tracker is facing due South (North in the Southern Hemisphere).

6. Fasten Cone Clamps
Align Cone Clamps with dimples and drill 2 holes into cone base.
Insert 4 rivets and fasten Cone Clamps using rivet gun.
Wire Bridle Assembly  Installation Instructions Appendix

1 Secure Wire Bridle Assemblies
Secure opposite Wire Rope Bridle Assemblies together with 1 Cable Tie.

CAUTION:
Unassembled Bridle Assemblies are a Trip Hazard. Use Caution During This Step.
Thermal Insulation Panel (TIP)
Installation Instructions Appendix

Assemble Transition Tubes
Align pre-punched holes and install rivets.

Install Transition Tube

Install Thermal Insulation Panel
Place Thermal Insulation Panel on top of Transition Tube. Transition Tube will rest on inside of TIP.

Note: For best thermal performance, install the Thermal Insulation Panel within the roofing assembly insulation level.

Use rivet gun to fasten rivets.

Refer to step 3 in the main set of M74 DS instructions (949990) for tab lock connection.

© 2016 Solatube International, Inc.
4 Install Transition Tube
Place Transition Tube on top of Thermal Insulation Panel. Transition Tube will rest on inside of TIP.

Align Transition Tube seams to ensure Tab Locks are properly aligned.

5 Install Tube Belt
Refer to step 4 in the main set of M74 DS instructions (949990) for Tube Belt connection.

6 Apply Foil Tape

Foil Tape

7 Rotate Fastening Straps

8 Install Fastening Screws
Secure each Fastening Strap to upper and lower Transition Tubes
